COMPUTER NETWORKING

IP PBX

DATA COMMUNICATION

VIDEO CONFERENCING

We offer unified communication solutions that allow all types of businesses to build customized, reliable and redundant communication solutions. This includes all of the products needed to build integrated voice, video, data and mobility solutions that increase productivity and make it easier than ever to communicate.

We provide unbiased advice, pre-sales support, and post-sales support on a comprehensive portfolio of telecom solutions for a wide variety of business needs. Please let us know what you need help with and we will have our qualified hands to review your needs with you.

The growing use of Internet-based applications has also fueled the growth of the smartphone market which, in turn, has increased the demand for cellular base stations to support the transmission and routing of a significant volume of communication signals.

OUR SERVICES

POWER

SOLAR POWER

INVERTER/UPS

An uninterruptible power supply or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails.

The For instance Uninterruptible Power Supply has a power output of 330 watts and is ideal for small devices such as routers, cable/satellite boxes, and Internet of Things (IoT) equipment. We have inverters, UPS, solar Power.

These solutions differ from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, super-capacitors.

OUR SERVICES

SECURITY

ACCESS CONTROL

BIOMETRIC TIME ATTENDANT

BOLLARD ACCESS CONTROL

ESTATE GATE BARRIER CONTROL

RFID

MANTRAP

TURNSTILES ACCESS CONTROL

At Rapid access we understand that everyone and everything around faces one kind of vulnerability threats to another, be it software as operating systems, application software, embedded software, mobile applications, and web applications, or Hardware and networking systems may contain embedded software, so IT assets- software, hardware, and networking related, all are usually under security threat.

Therefore, by adhering to software development engineering practices and security organizational processes, vulnerability issues can be addressed.
